

AI AROGYA SATHI
A GUIDE FOR OUR MENTOR

Every family deserves a health companion that's simple, honest, and always within reach.

EMPOWERING EVERY FAMILY WITH SAFE, SMART, ACCESSIBLE HEALTHCARE

This booklet explains the AI Arogya Sathi project in plain, everyday language — no technical terms — so it's easy to walk a mentor through what we're building and why.

THE IDEA, IN ONE BREATH

What Is AI Arogya Sathi?

AI Arogya Sathi is a health helper app for the whole family. You can ask it a health question the way you'd ask a knowledgeable friend — in your own words — and it gives you a simple, honest answer: what it might be, what you can do at home, and whether you should see a doctor.

It also keeps an eye on your health over time using a smartwatch or simple health devices, reminds your family to take medicines, and even works during emergencies when there is no internet at all.

One thing this app will never do

- It will never replace a doctor. It helps you understand what's happening and always points you to real medical help when it matters.

WHY WE'RE BUILDING THIS

The Problem We Are Solving

Most people don't ignore a health problem because they don't care. They ignore it because everything about getting help feels harder than doing nothing:

- Healthcare isn't always nearby, especially in villages and small towns
- The internet isn't always available or reliable
- It's hard to know what a symptom actually means
- Language makes most health apps and websites confusing
- Clinics and hospitals often mean long waits for a simple question
- Searching online rarely gives a trustworthy, clear answer
- There's no easy way to track your health from home, every day

REAL PEOPLE WE'RE DESIGNING FOR

Who We Are Building This For

We imagined three real kinds of people while designing every feature — so the app has to work for all of them, not just the tech-savvy user.

Rajesh, 48

Lives in a village, owns a smartphone

Needs quick, trustworthy advice · Can't always reach a doctor

Priya, 22

College student, owns a smartwatch

Wants her health data to make sense · Never wants to miss medicine

Savitri Devi, 67

Lives with high blood pressure and diabetes

Needs problems caught early · Needs help to reach fast in an emergency

EVERYTHING THE APP CAN DO — PART 1 OF 2

What The App Can Do

01 Talk to it like a person

Say what's wrong in your own words — “I have a fever” — and get a simple answer: what it could be, what to do at home, and whether to see a doctor.

02 Connects to your smartwatch

Works with Apple Watch, Fitbit, Garmin, Samsung Watch, and simple devices like BP monitors, oxygen monitors, and thermometers.

03 One screen for your whole health

Heart rate, blood pressure, oxygen level, sleep, weight, and more — all in one easy screen with simple graphs.

04 Notices problems early

Quietly watches your numbers over time and gently warns you when something looks off, like tiredness building up before you'd notice it yourself.

05 Checks your symptoms

Walks you through common problems — fever, cough, headache, stomach pain — and tells you how serious it might be.

06 Reminds you to take medicine

Never miss a dose again, with simple reminders and a record of what's been taken.

07 One profile per family member

Keeps everyone's age, blood group, allergies, conditions, and medicines organized in one place.

08 Works in an emergency — even without internet

Nearby hospitals, emergency contacts, and step-by-step guides for things like burns, snake bites, fractures, and heart attacks, all without needing signal.

EVERYTHING THE APP CAN DO — PART 2 OF 2

What The App Can Do, Continued

09 **Speaks your language**

Talk to it and hear it talk back in Hindi, English, and regional languages.

10 **Helps with food choices**

Recognises what you're eating and suggests healthier meals.

11 **A medical card you can scan**

One QR code shows your blood group, allergies, conditions, and medicines to anyone helping you in a hurry.

12 **Remembers your health story**

Simple graphs showing how your health has changed over weeks and months.

13 **Small daily nudges**

Gentle morning and night tips on exercise, water, food, and sleep.

14 **Support for women's health**

Period tracking, pregnancy support, and helpful, everyday tips.

15 **Watches over your child's growth**

Tracks height, weight, and vaccination schedule as your child grows.

16 **Looks after your mind, not just your body**

Mood tracking, breathing exercises, and simple guided meditation.

WHY YOU CAN TRUST ITS ANSWERS

How The App Gives Safe Answers

Before answering any health question, the app first looks through trusted health material — government health guidelines, WHO information, hospital and first-aid documents — and only then writes an answer in simple words. It always shows where the answer came from, so nothing is ever made up.

When there's no internet, it uses a lightweight helper built right into the phone, so core guidance still works. When it's online, it can call on a more capable helper for harder questions.

Our safety promise

- We always say clearly that this app does not diagnose disease.
- We always point people to a real doctor when it matters.
- We always flag emergency signs — like chest pain or trouble breathing — right away.
- We always ask permission before connecting a smartwatch or device, and keep health data private and secure.

WHAT USING IT ACTUALLY FEELS LIKE

A Day With The App

-
- | | |
|---|--------------|
| 1 | Open the app |
|---|--------------|
-
- | | |
|---|---|
| 2 | Pick which family member you're checking on |
|---|---|
-
- | | |
|---|---|
| 3 | The home screen opens, showing today's health picture |
|---|---|
-
- | | |
|---|---|
| 4 | Your smartwatch quietly syncs in the background |
|---|---|
-
- | | |
|---|-------------------------------|
| 5 | A simple health score appears |
|---|-------------------------------|
-
- | | |
|---|---------------------------------------|
| 6 | You ask a question, in your own words |
|---|---------------------------------------|
-
- | | |
|---|---|
| 7 | The app looks through trusted health material |
|---|---|
-
- | | |
|---|-------------------------------------|
| 8 | It gives you a clear, simple answer |
|---|-------------------------------------|
-
- | | |
|---|---|
| 9 | It checks whether anything needs closer attention |
|---|---|
-
- | | |

WHERE THIS IS HEADED

What We Will Build Next

Right now

A working chatbot that gives sourced, trustworthy answers; a symptom checker for the most common problems; and a health dashboard using sample health data.

Coming soon

Real connections to smartwatches and health devices, medicine reminders that actually notify you, and full family profiles.

Down the road

Connecting with real doctors, deeper food and nutrition tracking, a voice assistant in more regional languages, links to government health schemes, and direct hospital connections.

“We built AI Arogya Sathi because we believe good health guidance shouldn't depend on where you live, what language you speak, or whether you have signal.”

Thank you for reviewing our project.
